- Can we reduce footprint with labour? (2 drivers ->lower speed, more deadpile)
- Is it true it will be necessarily more expensive?
 - Is more expensive sustainable?

For the products below what we have said so far is impossible to apply, why?

Electricity

Exercise

Wine

compo

Logistic is a growing

component of Product Costs

Why do we need a Physical Internet?

- Trends...
 - Flow exponential growth (even if they will not reach the sky)

- Shipments fragmentation
 - Shipment median weight divided by 4,5 from 160 kg in 1988 to 30 kg in 2004 Source IFSTTAR 2013

• A no cost illusion for the consumers

• Expectations: better services and economic support to growth

Supply Chains inefficiency

Transport inefficiency is a €160 Billions loss and 1.3% of EU27 CO2 footprint!!! **10 YEARS: ZERO IMPROVEMENT ON LOAD FACTORS**

- 180 160 140 120 100 80
 - billion euro

Why is that so?

Full, but only 25% of weight limit

60% empty, but at weight limit

This is bad for both profitability and environment

Total food waste along the value chain:

Using our Scale for Good

Food Waste Hotspots

We have established the waste profiles for 25 of the must frequently purchased products so that we can identify those areas where we should prioritize our activity. This infographic shows some of the key insights from five of the products we analysed and what we are doing to tackle weste across the supply web.

Grapes

- Trialling new varieties of grapes with a longer life.
- New techniques to protect the grapes e.g. plastic covers in rainy geographies
- Fixing orders to get more fruit direct from our growers to our depots to ensure fresher products for our customers
- Consistent messaging around storage information on pack, online and integrated in customer communication

Total Production Wasted: 24%

D <1% <1%

Apples

- Growers involved in trials to reduce pest/ disease in orchards by using natural predators
- Increased crop utilisation through different product ranges
- Consistent messaging around. storage information on pack, online and integrated in customer communication

Total Production Wasted: 40%

Agriculture & supply

- We make use of all our suppliers? projecto reduce waste on tarm-
- conditions for banana itansport
- More effective ordering of sinck.
- on how to handle bananas with care-

Bagged Salad

- Twin packs offer 'leatime now, eatime later'

Bakery

- Loss bread displayed in our in-store-

Physical Internet

Physical Internet Concept

An open network approach to **Physical Distribution:**

- By encapsulating any type of goods in standard modules
- Like in the Internet It allows the creation of a very tight and efficient network maximizing transport and logistic assets utilization.

The key to an open network approach: modules

O A generalization of containerization

Montreuil, B., Meller, R. D. and Ballot, E. (2010). Towards a Physical Internet : the impact on logistics facilities and material handling systems design and innovation. In: AL., K. G. E. (ed.) Progress in Material Handling Research. Material Handling Industry of America

A practical approach

Conserving Resources: Distribution Optimizing Outbound Transportation

Our strategies for fewer and friendlier miles:

- Flow management
- Operational excellence by optimizing our distribution networks and vehicle fill
- Shifting to intermodal transportation
- Collaboration

2020 Goal: 20% Aduction km/unit of volume

"Cube-Fill" Concept

Cube Fill **Optimising Light & Heavy Goods Mix**

Light Goods: Only 25% of weight limit

.

Heavy Goods: Only **40% of volume limit**

This is bad for both profitability and environment

Mixed Goods: Target 80% weight & volume

P&G TINA PROJECT 2008-2015

30% TonKms shifted with no compromise on cost

45 M tons of CO₂ reduction

Flow Focusing (parallel and roundtrips, High Frequency)

Big flows – Product mix (more company's = more potential) Show Industry Leadership

BENEFITS OF SYNCHROMODALITY.

Reduction in transportation cost if slow mode is used for non-urgent volume (40% of total volume). Reduction in warehousing cost due to the shift from warehouse inventory to pipeline inventory.

PREREQUISITES FOR SYNCHROMODALITY.

Supply chain visibility at tactical level through a tactical control tower to design lanes. Supply chain visibility at operational level for the PSCs. Multiple leadtimes set-up in SAP APO DRP system versus one leadtime today.

MODULUSHCA

FUTURE

HARD

RPCs have to be ISO-MODULAR.

UK pallet type EURO pallet type <u>RPCs have to have straight walls.</u>

<u>RPCs have to be Stackable up to 2.40 meters</u>.

when they stack, the top of one RPC connects with the bottom of another to prevent the stack from slipping.

RPCs have to have flat inside surfaces.

RPCs must have the capability to have a lid

This document contains proprietary, confidential, and copyrighted (under the laws of the Urited States and other countries) materials of The Procter & Gamble Company (P&G). This document may not be duplicated, and the licensed information therein may not be used or disclosed in whole or in part for any purpose other than as authorized by P&G. Any use or disclosure in whole or in part of licensed information without the express written permission of P&G is prohibited.

<u>RPCs can be foldable</u> as a way to favour reverse logistics. However rigid walls are an option.

RPCs Lid "ability" We don't need to have every RPC with lid BUT RPCs must have the ability to install a lid in case of specific requirements [e.g. Dangerous Goods].

Protection can be realized through one RPC on top at the other and at the top either we put an empty RPC (if we store them in column) or we put a layer lid that will seal the top layer of the pallet (when we created a pallet of RPCs).

<u>RPCs wall thickness reduction is highly desirable in order to</u> increase the inner dimensions.

<u>RPCs should preferably be hermetic. However, in certain</u> applications could have holes in the walls allowing manual handling

RPCs should preferably be fully interlockable. Interlockability in all dimensions would be desirable.

SOFT

RPCs should be suitable for direct use as a retail merchandising unit.

RPCs must not be nestable.

(n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{n\}) = \frac{|S|! (n$$

$\{i\}) - v(S)$

NOBEL PRIZE FOR GAIN SHARING FORMULA: SHAPLEY VALUE

$$\phi_i(v) = \sum_{S \subseteq N \setminus \{i\}} \frac{|S|! (n - |S| - 1)!}{n!} (v(S \cup \{i\}) - v)$$

Shapley value is the only gain sharing concept that satisfies all the following fairness properties: **Efficiency**: The complete savings of collaboration are distributed **Monotonicity**: If player A adds more value to every coalition than player B, player A will get a higher payoff **Dummy**: A player that adds no value to any coalition, will receive no payoff > Symmetry: If two players add exactly the same value to every other coalition, they will get the same payoff Individual fairness: No player will suffer from collaboration (cost level after collaboration is not higher then individually, i.e. without collaboration)

v(S))

Shapley solution? The new Passenger should pay 50% of the costs:

- 1)
- (:)

A competitive advantage!

The single passenger is now paying as if he is sharing with another passenger

2) The group of 3 are now paying as if <u>they were 6 passengers</u> sharing the costs !

Note that: a scale of 6 is physically <u>IMPOSSIBLE if you do not COLLABORATE</u>

A SNIC Concept
